

Project 1 – Ecommerce Site
Wagner, Mark
SDEV300
Spring 2019

Screenshots:

This is the main page, followed by the submission page where you can make a purchase and leave comments, followed by an example of a product page, where the price is displayed in addition to any details about the item. It includes a link back to the main store page.

Features include:

- Embeddable on Facebook, Twitter, Instagram, and Snapchat
- Shareability with friender and myself
- Modifiable in paint.net
- Will not get you in trouble because it's a meme
- No text necessary in your post any longer!

Below is a screenshot of my access.log file. It demonstrates that all the images and pages are loaded and possibly cached, and shows their respective size in bytes. When I click the submit button, a post request is made followed by several get requests reloading all the images.

```

Above: This is access information from when I opened the apache directory.

Below: As I browsed the product pages, there were additional get requests for the images that were only used in that product page, therefore if you were to count the times each file appears, some files appear more than others.

```

Micro Note Win
